

Report on Environmental Field Study for BA/BSc Students

Venue: Florican Garden, Bilasipara Sub-division, Dhubri (Assam)

Date: 04/03/2020

On 4th March 2020, an Environmental Field Study was organized for BA and BSc students of Bilasipara College at Florican Garden, located in the Bilasipara Sub-division of Dhubri district, Assam. The objective of the study was to provide students with practical exposure to environmental conservation, biodiversity, and ecological sustainability.

The field study was led by faculty members from the Environmental Studies and Science departments, who guided students in observing various ecological aspects of the garden. The participants explored different plant species, avian diversity, and natural ecosystems present in the area. They also learned about the significance of conservation efforts and sustainable practices in maintaining biodiversity.

During the visit, students engaged in interactive sessions where they discussed the importance of preserving natural habitats and the role of human activities in environmental degradation. Faculty members provided insights into ecological balance, the impact of deforestation, and measures for sustainable development.

The study concluded with a reflective session where students shared their observations and insights gained from the visit. The faculty encouraged students to take an active role in promoting environmental awareness and conservation efforts in their communities.

The Environmental Field Study at Florican Garden was a valuable learning experience, enhancing students' understanding of ecological principles and reinforcing the importance of environmental responsibility. The event was highly successful, leaving a lasting impact on the participants.
